Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

First Year - First Semester

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name	:	Applied Physics
Credit Hours	:	3+1=4
Course Code	:	Theory (BH-114), Practical (BH-115)
Effective	:	2K20-BE(E)
Pre-Requisites	:	Nil
Weeks/Lectures/Labs	:	16/48/15
Marks	:	Theory (100), Practical (100)
Instructor Name	:	Engr. Abdul Manan Memon

DESCRIPTION

An Applied Physics course covers fundamental topics such as vectors, mechanics, electrostatics, and magnetism, providing a strong foundation in classical physics. It then delves into specialized areas like semiconductor physics, exploring the behavior of materials crucial to modern electronics. Additionally, students study waves, oscillations, optics, and lasers, exploring the principles of light and its applications. The course may conclude with an overview of modern physics, offering insights into cutting-edge research and technologies.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the theories of static charges and basic law of physics and identify application of their basic law in various field of engineering	Cognitive	C2	1	25
	2	Define and explain the basics of electricity and magnetism.	Cognitive	C2	1	53
	3	Formulate and solve the basic problems of electrostatic and magnetism.	Cognitive	C3	2	22

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice basic circuits under guidance on a breadboard and trainer kits.	Psychomotor	P3	9	100

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Vectors (review of vectors, ordinary differentiation of vectors, gradient of scalar field, divergence and curl of vector field, line and surface integrals with applications), Mechanics (Newton's laws and their applications, simple accelerometer, banked curve and rotor, frictional forces and coefficient of friction, work-energy theorem, conservation of energy, angular momentum, centre of mass of two-particles and many-particle systems, rotational inertia of solid bodies), Electrostatics and Magnetism (electric field due to discrete and continuous charge distribution, electrostatic potential, Gauss's law applications, Lorentz force, Hall effect, Ampere's law, magnetic field due to circular current loop and solenoid, magnetic dipole, atomic and nuclear magnetism, magnetization, magnetic materials), Semiconductor Physics (energy levels in semiconductors, hole concept, intrinsic and extrinsic regions, law of mass action, P-N junction, transistors), Waves and Oscillations (simple harmonic motion, damped and forced oscillations, resonance, types of waves, superposition principle, wave speed on stretched string, wave equation, energy and power of waves), Optics and Lasers (Huygens' principle, two-slit interference, single-slit diffraction, resolving power of optical instruments, principles of laser action, types of lasers, applications of lasers), Modern Physics (Planck's black body radiation, photoelectric effect, Compton effect, de Broglie hypothesis, electron microscope, atomic structure, X-rays, Moseley's law, atomic nucleus and its properties, radioactivity)

COURSE OUTLINE (PRACTICAL)

Introduction to safety and measuring instruments, verification of Ohm's law, basic understanding of passive components such as capacitors, inductors, and transformers, colour coding of resistors, resistors in series and parallel, capacitor combinations, charging and discharging of capacitor, LED characteristics, Faraday's law of electromagnetic induction, diode characteristics, overview of Multisim simulation

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

Subject Name	: Calculus and Analytical Geometry
Credit Hours	: 3+0=3
Course Code	: Theory (BH-116)
Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Umair Abro

DESCRIPTION

Calculus and Analytical Geometry equips students with the mathematical techniques needed for engineering analysis. The course covers differential and integral calculus, multivariable functions, sequences and series, and the study of curves and surfaces using algebraic and geometric methods, fostering analytical thinking and problem-solving skills applicable in engineering and applied science.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Understand the concept of a function and its representation.	Cognitive	C2	1	22
	2	Discuss derivatives of various functions using the power rule, chain rule, and other differentiation techniques	Cognitive	C2	1	33
	3	Apply algebraic and geometric techniques to study curves and shapes in the Cartesian coordinate system.	Cognitive	C3	2	45

COURSE OUTLINE (THEORY)

Analytical Geometry (review of vectors, scalars and vector products, three-dimensional coordinate system, equation of straight line and plane), Functions, Limit and Continuity (review of functions and graphs, limits and continuity, techniques of finding limits, discontinuity, limits of sine, cosine and exponential functions), Differentiation (introduction to derivatives, examples of derivatives, derivative as rate of change, derivative rules, implicit differentiation, higher order derivatives, Leibnitz theorem), Applications of Derivatives (monotonic functions, optimization problems, relative and absolute extrema, first and second derivative tests, point of inflection, concavity, curvature, indeterminate forms, L'Hospital's

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

rule, differentials), Integration (integrals and properties, techniques of integration, integration by parts, definite integrals, integration of trigonometric, exponential and inverse functions, partial fractions, reduction rules), Applications of Integration (area under the curve, area between curves, solids of revolution, volume by disk, washer, cylindrical shell and cross-section methods, center of pressure, depth of center of pressure, center of mass, arc length), Improper Integrals (improper integrals, singularities, convergence of improper integrals), Infinite Sequence and Series (sequence and infinite series, convergence and divergence, positive term series, integral test, comparison test, limit comparison test, ratio and root tests, alternating series, absolute and conditional convergence), Power and Taylor Series (power series, Maclaurin and Taylor series, applications)

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name	: Computer Fundamentals and Programming
Credit Hours	: 2+1=3
Course Code	: Theory (CS-112), Practical (CS-113)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/32/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Noor ul Ain

DESCRIPTION

This course provides an introduction to computer systems and programming fundamentals, focusing on problem-solving, algorithm development, and structured programming using a high-level language. It develops logical and computational skills required for engineering applications.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Define components of a computer system and core programming concepts.	Cognitive	C1	1	20
	2	Design and demonstrate the solution of problems using loops, arrays, functions, and structures.	Cognitive	C3	3	80

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice the programs under guidance to compute the output using modern engineering tools.	Psychomotor	P3	5	100

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Computers (history and evolution of computers, classification of computers, applications of computers in modern society), Computer System Organization (basic components of a computer system, central processing unit (CPU), memory hierarchy: primary and secondary memory, peripheral devices: input/output devices), Storage Systems and Data Organization (storage media and storage devices, physical and logical storage, data organization, file storage concepts), Software Concepts (programs and software, types of software: system software, application software, operating systems and their functions), Programming Languages and Translators (programming languages: low-level and high-level, compilation and interpretation, language translators), Problem Solving and Program Design (problem specification, algorithms, flowcharts, pseudo code), Programming Fundamentals (basic programming techniques, data types and declarations, variables and constants, header files and linkage, arrays), Input / Output and Program Structure (input and output operations, program termination, remarks/comments in programs), Control Structures (control structures in programming, branching and conditional structures, repetition and loops), Library Functions (basic library functions, use of predefined functions), Social and Professional Impact of Computing (social impact of the computer age, role of computers in offices, industry, education)

COURSE OUTLINE (PRACTICAL)

Computation of number system, implementation of Boolean functions, basic machines organization including motherboard, memory, I/O cards, networking devices, use of flow charts, introduction to office tools, overview of different browsers including open-source browsers, introduction to various operating systems, coding, executing and debugging simple programs, implementation of simple control structures, implementation of simple functions, implementation of different function styles.

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name	: Electronics Workbench
Credit Hours	: 0+1=1
Course Code	: Practical (EE-119)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/0/15
Marks	: Practical (100)
Instructor Name	: Engr. Anusa Shah

DESCRIPTION

Electronics Workbench provides hands-on experience in simulating and analyzing electronic circuits using computer-aided design tools, enabling students to design, test, and troubleshoot electronic systems in a virtual environment.

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Identify electronic components and virtual instruments available in circuit-simulation software.	Psychomotor	P1	1	25
	2	Construct and simulate basic electronic circuits under guidance using modern engineering tools.	Psychomotor	P2	5	35
	3	Simulate , test, and troubleshoot electronic circuits and interpret the obtained results using modern engineering tools.	Psychomotor	P3	5	40

COURSE OUTLINE (PRACTICAL)

Introduction to circuit-simulation software and schematic capture; placement and configuration of resistors, capacitors, inductors, diodes, transistors, operational amplifiers, sources, and grounding; use of virtual instruments including multimeter, oscilloscope, function generator, and logic analyzer; simulation of DC and AC circuits; verification of Ohm's law and Kirchhoff's laws; analysis of rectifiers, filters, transistor biasing, amplifiers, and basic digital circuits; parameter sweeps and waveform measurements; comparison of simulated and calculated results; fault insertion, troubleshooting, and documentation of simulation results.

Subject Name	: Functional English
Credit Hours	: 3+0=3
Course Code	: Theory (BH-100)
Effective	: 2K20-BE(EF)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Mr. Manzoor Pahnwar

DESCRIPTION

This course is designed to equip students with essential language skills for effective communication in diverse real-world scenarios. It focuses on developing proficiency in English language usage: word choices, grammar and sentence structure. In addition, the course will enable students to grasp nuanced messages and tailor their communication effectively through application of comprehension and analytical skills in listening and reading. Moreover, the course encompasses a range of practical communication aspects including professional writing, public speaking and everyday conversation, ensuring that students are equipped for both academic and professional spheres. An integral part of the course is fostering a deeper understanding of the impact of language on diverse audiences. Students will learn to communicate inclusively and display a strong commitment to cultural awareness in their language use. Additionally, the course will enable them to navigate the globalized world with ease and efficacy, making a positive impact in their functional interactions.

COURSE LEARNING OUTCOMES:

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Participate individually and collaboratively in communication tasks while demonstrating teamwork and responsible leadership.	Affective	A3	9	23
	2	Deliver effective oral presentations and produce structured essays, reports, and summaries using appropriate academic and professional conventions.	Cognitive	C3	10	23
	3	Respond positively to feedback and demonstrate commitment to continuous improvement in grammar, vocabulary, pronunciation, and written communication.	Affective	A2	12	54

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Foundations of Functional English (vocabulary building: contextual usage, synonyms and antonyms, idiomatic expressions; communicative grammar: subject–verb agreement, verb tenses, fragments and run-ons, modifiers, articles, word classes; word formation: affixation, compounding, clipping, back formation; sentence structure: simple sentences, compound sentences, complex sentences, compound-complex sentences), Sound Production and Pronunciation, Comprehension and Analysis (understanding purpose, audience, and context; contextual interpretation: tones, biases, stereotypes, assumptions, inferences; reading strategies: skimming, scanning, SQ4R, critical reading; active listening: overcoming listening barriers, focused listening)

Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name	: Linear Circuit Analysis
Credit Hours	: 3+1=4
Course Code	: Theory (EE-110), Practical (EE-111)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Dr. Mudassir Ahmed Memon

DESCRIPTION

The Linear Circuit Analysis course provides undergraduate students with a foundation in basic linear electrical circuits using passive elements. It introduces essential circuit concepts including charge, current, voltage, current and voltage sources, and key circuit laws such as Ohm's law and Kirchhoff's laws. Students learn analytical techniques including nodal and mesh analysis, superposition, source transformations, and fundamental network theorems such as Thevenin's, Norton's and Maximum Power Transfer. The course also covers energy storage elements and transient/steady-state behavior of first-order circuits

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain basic concepts and terms along with related theorems, laws, and methods for analysis used in the electric circuits.	Cognitive	C2	1	20
	2	Use circuit reduction techniques such as series, parallel and source conversions and circuit solving techniques like Mesh and Nodal Analysis and theorems to analyze solutions for static and transient circuits	Cognitive	C3	4	80

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Perform experiments under guidance in the laboratory in order to interpret experimental data and observe its performance with analyzed results of electrical circuits.	Psychomotor	P3	9	100

COURSE OUTLINE (THEORY)

Electrical Elements and Circuits (resistance, inductance, capacitance, basic laws: Ohm's Law and Kirchhoff's Laws), Phasor Quantities (representation of phasors using j notation, addition, subtraction, multiplication, complex expressions for voltage, complex expressions for current, complex expressions for power, complex expressions for impedance), Series and Parallel Circuits (RL series circuits, series circuits, parallel circuits, resonance in series circuits, resonance in parallel circuits), DC Network Theorems (mesh/loop analysis, nodal analysis with DC sources, source conversions, superposition, Thevenin's Theorem, Norton's Theorem, Reciprocity Theorem, Maximum Power Transfer Theorem).

COURSE OUTLINE (PRACTICAL)

Study of DC series circuits, parallel circuits, Kirchhoff's current and voltage laws, current divider theorem, voltage divider theorem, network theorems, simple RLC circuits, and simulation of basic electrical circuits using PSPICE. Lab activity will be followed by semester project.

Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Ms. Iqra Pathan

DESCRIPTION

This course develops students' professional and academic communication skills, including oral presentations, report and essay writing, CV preparation, and research writing. Emphasis is placed on effective verbal and written communication, study skills, and vocabulary development for professional and academic contexts.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Analyze advanced written and spoken English for semantic and pragmatic accuracy in academic and professional contexts.	Cognitive	C4	10	10
	2	Apply appropriate vocabulary and language structures in professional writing and speaking and correct common English-language errors.	Cognitive	C3	10	60
	3	Accept feedback on pronunciation and presentation skills and respond constructively to improve oral communication.	Affective	A2	12	30

COURSE OUTLINE (THEORY)

The 7 Cs of Communication (introduction to the 7 Cs of effective communication: clarity, conciseness, completeness, correctness, concreteness, courtesy, consideration; importance of the 7 Cs in professional communication; application of the 7 Cs in managerial communication, marketing communication, routine official and workplace communication, oral presentations, report writing, curriculum vitae (CV) and job applications), Study Skills (reading techniques and strategies: skimming and scanning, intensive and extensive reading; speed reading; academic comprehension skills; summary writing techniques; precis writing: rules, techniques,

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Electronics (overview of electronic devices and circuits, active and passive components, semiconductor materials and basic concepts, intrinsic and extrinsic semiconductors, energy band theory), Diodes (PN Junction Diode: formation and working principle of PN junction, forward and reverse bias characteristics, ideal vs practical diode, equivalent circuit models, current equation of a diode, diode as a switch; Types of Diodes: Zener diode, LED, photodiode, Schottky diode, varactor diode, tunnel diode; Applications of Diodes: half-wave rectifier, full-wave rectifier (center-tapped & bridge), ripple factor and efficiency, clipper circuits, clamper circuits, voltage multipliers: doubler, Tripler), Bipolar Junction Transistor (BJT) (Fundamentals: construction and operation of BJT, NPN and PNP transistors, unbiased transistor behavior; DC Analysis and Biasing: DC biasing methods, static characteristics (input & output), DC circuit analysis, load line analysis, operating point (Q-point), bias stabilization techniques; Transistor as an Amplifier: basic amplification principle, small signal operation, amplifier characteristics; Transistor Configurations: common emitter (CE), common base (CB), common collector (CC)), Field Effect Transistor (FET) (Introduction: construction and working principle, JFET and MOSFET basics, comparison of BJT and FET; FET Biasing Techniques: fixed bias, self-bias configuration, voltage divider biasing; FET Configurations: common source, common drain, common gate; Universal JFET Bias Curve: transfer characteristics, Shockley equation), Special Transistor Configurations (Darlington pair, advantages and applications), Introduction to CMOS (basic CMOS structure, MOS inverter, advantages of CMOS technology, applications in digital electronics).

COURSE OUTLINE (PRACTICAL)

The emphasis is first on understanding the characteristics of basic circuits that use resistors, capacitors, diodes, bipolar junction transistors and field-effect transistors. The students then use this understanding to design and construct more complex circuits such as rectifiers, amplifiers and power supplies.

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name	: Linear Algebra
Credit Hours	: 3+0=3
Course Code	: Theory (BH-126)
Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Umair Abro

DESCRIPTION

This course covers the fundamentals of linear algebra, including matrices, determinants, vector spaces, linear transformations, eigenvalues and eigenvectors, and their applications in solving systems of linear equations and engineering problems.

COURSE LEARNING OUTCOMES:

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Illustrate how to solve a system of linear equations that appears in different engineering applications.	Cognitive	C2	1	47
	2	Apply the basic knowledge of vector spaces, eigen value and eigen vectors.	Cognitive	C3	2	53

COURSE OUTLINE (THEORY)

Systems of Linear Equations (algebra of matrices, types of matrices, matrix operations, inverse of a matrix, Gaussian elimination, Gauss–Jordan method, homogeneous and non-homogeneous systems, rank of a matrix, pivoting strategies), Determinants (definition of determinant, properties of determinants, cofactor expansion, determinants and invertibility, applications of determinants, determinants from a computational point of view), Vector Spaces (vectors in the plane and three dimensions, vector spaces, subspaces, span, linear independence, basis, dimension, coordinates, change of basis, isomorphism), Eigenvalues and Eigenvectors (characteristic equation, eigenvalues, eigenvectors, diagonalization, Hermitian matrices, eigenvalue problems, applications of eigenvalues), Orthogonality and Least Squares (inner product spaces, orthogonal vectors, orthogonal transformations, orthogonal matrices, least square problems, applications in engineering), Advanced Matrix Concepts (singular value decomposition, quadratic forms, positive definite matrices, non-negative matrices, matrix norms, condition numbers), Numerical Linear Algebra (floating-point numbers, numerical stability, error analysis in linear systems, computational considerations in matrix operations),

University of Sindh Jamshoro

Subject Name	: Object Oriented Programming
Credit Hours	: 3+1=4
Course Code	: Theory (CS-124), Practical (CS-125)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Muhammad Hussain Pirzada

DESCRIPTION

This course introduces the principles of object-oriented programming, including classes, objects, inheritance, polymorphism, encapsulation, and abstraction. Students will learn to design, implement, and debug modular and reusable software using object-oriented concepts and programming languages.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the principles of object-oriented programming, including classes, objects, encapsulation, inheritance, and polymorphism.	Cognitive	C2	2	80
	2	Apply object-oriented concepts to design modular and reusable programs for engineering problems.	Cognitive	C3	3	20

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Develop , execute, debug, and test object-oriented programs under guidance using modern development tools.	Psychomotor	P3	5	100

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Object-Oriented Programming (programming paradigms, objects, classes, attributes, methods, abstraction, encapsulation), Classes and Objects (class declaration, object creation, access specifiers, constructors, destructors, static members, this pointer), Functions and Overloading (member functions, inline functions, function overloading, default arguments, operator overloading), Inheritance (single, multilevel, multiple, hierarchical, and hybrid inheritance; access control; constructor and destructor order), Polymorphism (compile-time and run-time polymorphism, virtual functions, pure virtual functions, abstract classes, dynamic binding), Templates and Generic Programming (function templates and class templates), Exception Handling (try, throw, catch, user-defined exceptions), File Handling and Persistence (text and binary files, stream classes), Object-Oriented Design and Testing (modularity, reuse, debugging, testing, and documentation of object-oriented programs).

COURSE OUTLINE (PRACTICAL)

Development of object-oriented programs using classes and objects; implementation of constructors and destructors; function and operator overloading; inheritance and polymorphism; virtual functions and abstract classes; templates; exception handling; file handling; debugging and testing using an integrated development environment; development of a small object-oriented semester project.

Weeks/Lectures/Labs	: 16/32/0
Marks	: Theory (100)
Instructor Name	: Mr. Imran Noonari

DESCRIPTION

This course provides an overview of Pakistan's history, ideology, geography, political development, economy, society, and contemporary issues. It emphasizes the understanding of national identity, constitutional development, governance, and the role of Pakistan in regional and global contexts

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Describe the key events leading up to the creation of Pakistan and know about Pakistan's historical perspective, geo location, constitutional phases, contemporary affairs and future challenges	Cognitive	C1	7	35
	2	Demonstrate the Constitutional, Political and Diplomatic History of Pakistan	Cognitive	C3	6	65

COURSE OUTLINE (THEORY)

Historical Perspective (ideological rationale with special reference to Sir Syed Ahmed Khan, Allama Muhammad Iqbal and Quaid-e-Azam Muhammad Ali Jinnah, factors leading to Muslim separatism, people and land, Indus Civilization, Muslim advent in the subcontinent, location of Pakistan, geo-physical features of Pakistan), Government and Politics in Pakistan (political and constitutional phases: 1947–58, 1958–71, 1971–77, 1977–88, 1988–99, political and constitutional developments from 1999 onward), Contemporary Pakistan (economic

Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Abdul Manan Memon

DESCRIPTION

This course covers the principles and applications of solid-state electronic devices, including semiconductors, diodes, transistors, FETs, and optoelectronic devices. Students will study device characteristics, operational principles, and their use in analog and digital circuits.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the theories of solid-state Physics, Quantum Mechanics and semiconductor materials and Devices.	Cognitive	C2	1	68
	2	Solve and formulate the basic problem of crystal lattice structures, diodes and BJT.	Cognitive	C3	2	32

COURSE OUTLINE (THEORY)

Semiconductor Fundamentals (introduction to semiconductor materials, basic crystal structure of semiconductors, intrinsic and extrinsic semiconductors, energy band theory, carrier concentration, electrical properties of semiconductors), Carrier Transport Mechanisms (drift current, diffusion current, mobility, conductivity, continuity equation, carrier generation and recombination, transport equations), PN Junction and Contacts (formation of pn junction, built-in potential, depletion region, current-voltage characteristics of pn junction, breakdown mechanisms, metal-semiconductor contacts, ohmic and Schottky contacts), Field Effect Transistors (junction field-effect transistor (JFET), mathematical models of JFET, metal oxide semiconductor field-effect transistor (MOSFET), MOS structure and operation, current-voltage characteristics of MOSFET), Bipolar Junction Transistors (structure and operation of bipolar transistors, current components in BJT, Ebers-Moll model, small-signal models,

Effective : 2K20-BE(EE)
Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/0/15
Marks : Practical (100)
Instructor Name : Engr. Abdul Manan Memon

DESCRIPTION

This course introduces the principles and techniques of engineering drawing using computer-aided design (CAD) software. Students learn to create accurate 2D and 3D drawings, orthographic projections, sectional views, assemblies, and engineering documentation for design and manufacturing applications.

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Manipulate basic computer-aided engineering drawing tools under guidance to prepare engineering drawings.	Psychomotor	P2	5	25
	2	Produce accurate two-dimensional and three-dimensional engineering drawings using modern CAD tools.	Psychomotor	P3	5	75

COURSE OUTLINE (PRACTICAL)

Introduction to computer-aided design tools such as AutoCAD, OrCAD and PCAD; computer-aided drafting principles and practices; engineering drawing fundamentals using AutoCAD; drawing of electrical machinery and layouts of electronic assemblies; design and layout of circuit boards using software (PCAD or OrCAD).

Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Abdul Wahab Khokar

DESCRIPTION

This course covers the formulation, solution, and applications of ordinary and partial differential equations. Topics include first- and second-order differential equations, series solutions, Laplace and Fourier transforms, and modelling of engineering and physical systems.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Define basic mathematical concepts related to differential equation.	Cognitive	C1	1	24
	2	Examine different types of analytical methods for solution of differential equation.	Cognitive	C2	2	18
	3	Develop and solve different engineering problems in the form of differential equations.	Cognitive	C3	2	58

COURSE OUTLINE (THEORY)

Ordinary Differential Equations (ODEs) (formulation of differential equations, order and degree of a differential equation, linearity of differential equations, complementary and particular solutions, initial-value problems, boundary-value problems, solution of first-order linear differential equations, Bernoulli's differential equation, solution of second-order ordinary differential equations), Partial Differential Equations (PDEs) (origin and formulation of partial differential equations, solutions of first-order partial differential equations, solutions of second-order partial differential equations, higher-order partial differential equations, homogeneous partial differential equations of order one, Lagrange's method of solution), Linear PDEs in Engineering Applications (second-order linear partial differential equations, wave equation, heat equation, applications in engineering and physical sciences, solution using Fourier series), Series Solutions of Differential Equations (review of power series, series solutions near ordinary points, Legendre equation, types of singular points, Euler's equation,

Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/48/15
Marks : Theory (100),
Practical (100)
Instructor Name : Dr. Raza Hussain Shah

DESCRIPTION

This course introduces the principles of digital logic design, including number systems, Boolean algebra, logic gates, combinational and sequential circuits, state machines, memory elements, and basic programmable logic devices. Students will develop skills for designing and analyzing digital systems.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Define the fundamentals and underlying principles of digital design	Cognitive	C1	1	60
	2	Compute number systems and logic conversion and gate level minimization using K-map and combinational logic by employing analysis and design procedure.	Cognitive	C3	3	40

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Execute small-scale logic circuits (basic, combinational, Sequential, Digital circuits) for the desired output.	Psychomotor	P4	4	100

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Digital Design (basic concepts of digital systems, number systems, logic levels, logic gates, Boolean algebra, DeMorgan's theorems, simplification of Boolean functions), Combinational Logic Design (Karnaugh maps, tabulation techniques: Quine-McCluskey, design of combinational circuits, adders, subtractors, multiplexers, demultiplexers, encoders, decoders, comparators), Sequential Logic Design (sequential circuits, flip-flops: SR, JK, D, T, registers, shift registers, counters, synchronous and asynchronous circuits, state machines, memory elements, simple programmable logic devices (SPLDs)), Hardware Description Languages (HDL) (introduction to Verilog and VHDL, simulation of combinational and sequential circuits, synthesis and hardware implementation), Practical Implementation and Project Work (implementation of sequential circuits using Verilog/VHDL, implementation of logic circuits using SPLDs, project solving a real-life problem using digital design techniques, testing and verification of digital systems)

COURSE OUTLINE (PRACTICAL)

Basic logic gates; Verilog simulation and hardware implementation of combinational circuits such as MUX/DEMUX, encoder/decoder, arithmetic logic unit (ALU); Verilog simulation and hardware implementation of sequential circuits such as flip-flops, registers, shift registers, counters; implementation of logic circuits using SPLDs; project solving a real-life problem.

Marks	: Theory (100), Practical (100)
Instructor Name	: Mr. Waseem Javaid Soomro

DESCRIPTION

This course covers the design, analysis, and implementation of electronic circuits using diodes, transistors, and FETs. Topics include amplifier design, biasing techniques, feedback, oscillators, and practical analog circuit applications.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Define the basic concepts of amplifiers and its behavioral analysis with the help of hybrid parameters, AC & DC load lines	Cognitive	C1	1	40
	2	Distinguish the frequency characteristics and stability analysis of different electronic devices, including filters, amplifiers, and oscillators	Cognitive	C2	2	60

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice the amplifier circuits based on semiconductor devices under guidance in the laboratory.	Psychomotor	P3	4	100

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Amplifier Analysis (transistor as an amplifier, hybrid model of a transistor, small-signal analysis, large-signal analysis, gain calculation of single-stage amplifier, cascading, multistage gain calculations), Classification of Amplifiers (based on biasing: Class A, Class B, Class AB, Class C, push-pull, complementary symmetry; based on coupling: RC-coupled, transformer-coupled, direct-coupled; based on frequency: audio-frequency, radio-frequency, tuned), Feedback in Amplifiers (feedback concept, feedback amplifiers, voltage feedback amplifier, current feedback amplifier, effect of feedback on gain and frequency response), Practical Amplifier Considerations (input and output impedance, amplifier loading, impedance matching, stability, distortion, bandwidth considerations), Oscillators (basic theory of oscillators, tank circuit, damped and undamped oscillations, phase-shift oscillator, Colpitts oscillator, Hartley oscillator, Wien bridge oscillator, Clapp oscillator, frequency determination).

COURSE OUTLINE (PRACTICAL)

Transistor curve tracer, introduction to PSPICE and AC voltage dividers, characterization and design of emitter and source followers, characterization and design of AC variable-gain amplifier, design of test circuits for BJTs and FETs, design of FET ring oscillators, design and characterization of emitter-coupled transistor pairs, tuned amplifier and oscillator, design of oscillators.

Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice measurement and instrumentation system under guidance that can meet criteria and underlying mechanisms developed for actual devices and instruments and analyze the results using modern engineering tools	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Fundamentals of Measurement (precision measurement terminologies: resolution, sensitivity, accuracy, uncertainty; engineering units and standards; principles of different measurement techniques), Measurement of Physical Quantities (instruments for measurement of electrical properties, pressure, temperature, position, velocity, flow rates: mass and volume, concentration; transducers and sensors for various applications), Instrumentation Systems and Signal Processing (systems for signal processing and signal transmission, static and dynamic responses of instrumentation, signal conditioning, modern instrumentation techniques, data acquisition systems, basic data manipulation using personal computers and graphs), Electrical Measuring Instruments (principles of operation, construction, and working of analog and digital meters, oscilloscopes, recording instruments, signal generators, power and energy meters, bridges for measurement of resistance, inductance, and capacitance, high-voltage measurements).

COURSE OUTLINE (PRACTICAL)

Design, construction, and analysis of measurement circuits, data acquisition circuits, instrumentation devices, and automatic testing; measurement of electrical parameters using different lab instruments; calibration of measurement instruments; use of data acquisition systems for presentation and interpretation of data; use of microcomputers to acquire and process data; use of simulation and instrumentation languages (LabVIEW).

Instructor Name	: Dr. Shahnawaz Shah

DESCRIPTION

This course introduces complex variable theory and integral transforms for engineering applications. Topics include analytic functions, Cauchy-Riemann equations, contour integration, singularities, residues, Laplace and Fourier transforms, and their use in solving differential equations and system analysis.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Identify the complex number, complex functions, and fundamental theorems of complex-valued functions	Cognitive	C1	1	30
	2	Express the concept of the calculus for the complex-valued functions and the properties of various transforms.	Cognitive	C2	1	30
	3	Apply the computational and conceptual principles of various transforms for solving problems in engineering and sciences.	Cognitive	C3	2	40

COURSE OUTLINE (THEORY)

Complex Numbers and Functions (introduction to complex number systems, Argand's diagram, modulus and argument of a complex number, polar form, De Moivre's theorem and applications, complex functions, analytical functions, harmonic and conjugate harmonic functions, Cauchy-Riemann equations), Complex Integration (line integrals, Green's theorem, Cauchy's theorem, Cauchy's integral formula, singularities, poles, residues, contour integration, applications of residue theorem in engineering problems), Laplace Transform (definition, Laplace transforms of elementary functions, properties, periodic functions and their transforms, inverse Laplace transform and its properties, convolution theorem, inverse Laplace

This course introduces the principles and techniques for analyzing electrical networks. Topics include network theorems, AC and DC circuit analysis, phasor techniques, transient and steady-state responses, resonance, and applications in electrical engineering systems.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain AC circuits in time and frequency domains	Cognitive	C2	1	40
	2	Analyze balanced three-phase systems	Cognitive	C4	2	40
	3	Use simple electric circuit models to examine the behavior of complex networks	Cognitive	C3	4	20

LABORATORY LEARNING OUTCOMES:

Upon successful completion of the lab experiments, the student will be able to

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Establish circuits under guidance on breadboards and perform electrical measurements and analyze the results using modern engineering tools	Psychomotor	P3	5	100

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

AC Circuits and Network Analysis (complete response of RLC circuit, resonance, lossless LC circuit, complex forcing functions, phase relationships for R, L, and C, impedance and admittance, sinusoidal steady-state response, quality factor, power factor and power factor improvement, complex frequency), Three-Phase Circuits (three-phase balanced and unbalanced circuits, three-phase source-load connections, power relationships), Magnetically Coupled Circuits (mutual inductance, energy considerations, ideal transformers), Frequency Response and Network Performance (variable frequency network performance, variable frequency response analysis, sinusoidal frequency analysis), Transform Methods in Circuit Analysis (analysis of circuits using Laplace transform and Bode plot, analysis of circuits using Fourier series), Resonant and Filter Circuits (resonant circuits, filter circuits), Two-Port Networks (general two-port networks, impedance parameters, admittance parameters, transmission parameters, hybrid parameters, interconnection of two-port networks).

COURSE OUTLINE (PRACTICAL)

Basic RL and RC circuits, RLC circuit, sinusoidal steady-state analysis, AC power circuit analysis, poly phase circuits, frequency-domain analysis and Bode plots, network analysis in the s-domain, mutual inductance and transformers, two-port networks, circuit analysis techniques using software packages such as PSPICE, Electronic Workbench, Multi-Sim, and Lab View.

Subject Name	: Integrated Electronics
Credit Hours	: 3+1=4
Course Code	: Theory (EE-222), Practical (EE-223)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Dr. Ayaz Ali Hakro

DESCRIPTION

This course covers the principles, design, and applications of integrated electronic circuits. Topics include operational amplifiers, analog and digital ICs, device characteristics, signal processing, and practical circuit design using integrated components.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the device fabrication process, internal biasing circuits of ICs, i.e., current mirrors and current sources, and describe various logic families	Cognitive	C2	1	28
	2	Apply operational amplifiers in different applications based on understanding their different configurations	Cognitive	C3	3	38
	3	Analyze the various operations of op-amp, such as differentiators, integrators, comparators, summing, A/D & D/A converter with given specifications.	Cognitive	C4	2	34

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice the various types of operational amplifier circuits under guidance and build a semester project based on an operational amplifier IC, and analyze the results using modern engineering tools.	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Pulse and Switching Circuits (design and analysis of pulse circuits, switching circuits and their characteristics, monostable, astable, and bistable multivibrators, emitter-coupled flip-flop, noise margin, fan-out, propagation delay, Schmitt trigger), Logic Families (saturating and non-saturating logic families: DTL, TTL, ECL, PL, CMOS), Timer ICs and Applications (detailed study of timer ICs, monostable and astable configurations, applications of timer circuits), Analog and Digital Circuit Interface (analog and digital interfacing techniques, mixed-signal applications), Fabrication of Digital Microelectronic Circuits (introduction to pMOS, nMOS, CMOS and BiCMOS circuits, epitaxy, ion implantation, oxidation), Differential Amplifiers (DC and AC analysis of differential amplifier, design of simple differential amplifier, level translator), Current Sources and Output Stage Design (simple current mirror, Wilder current source, Wilson current source, output stage design), Operational Amplifiers (op-amp as a circuit element, offset and offset compensation, op-amp with negative feedback, frequency response, DC and AC analysis of op-amp ICs), Amplifiers (linear and non-linear applications).

COURSE OUTLINE (PRACTICAL)

Comparator analysis, inverting and non-inverting amplifiers, analog-to-digital and digital-to-analog converters, dual regulator, switched-capacitor voltage converter, op-amp DC characteristic measurement, op-amp speed, single-supply op-amp, function generator, phase locked-loop, frequency synthesizer.

Subject Name	: Islamic Studies
Credit Hours	: 2+0=2
Course Code	: Theory (IS-202)
Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/32/0
Marks	: Theory (100)
Instructor Name	: Mr. Hafiz Sibghatullah Bhutto

DESCRIPTION

This course introduces the fundamental concepts of Islam, including the study of the Holy Quran, Seerah of the Holy Prophet (S.A.W), Hadith, Islamic law and jurisprudence, Islamic culture and civilization, and the social, economic, and political teachings of Islam.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the scope and significance of basic beliefs & pillars of Islam, their effects on different aspects of individual life and society	Cognitive	C2	6	60
	2	Determine the understanding of the Quran, Hadith, and the life of Holy Prophet Muhammad (P.B.U.H) as the source of inspiration and guidance	Cognitive	C3	8	40

COURSE OUTLINE (THEORY)

Introduction to Quranic Studies (basic concepts of the Quran, history of the Holy Quran, Uloom-ul-Quran, study of selected texts: Surah Al-Baqara 284–286, Surah Al-Hujrat 1–18, Surah Al-Mumanoon 1–11, Surah Al-Furqan 63–77, Surah Al-Inam 162–164, Surah Al-Ihzab 6, 21, 40, 56–58, Surah Al-Hashar 18–20, Surah Al-Saf 1, 14), Seerat of the Holy Prophet (S.A.W) (life before Prophethood, life in Makkah: important lessons, life in Madina: important events and lessons), Introduction to Sunnah and Hadith (basic concepts, history, kinds of Hadith, Uloom-ul-Hadith, legal position of Sunnah, selected study from Hadith texts), Introduction to Islamic Law & Jurisprudence (basic concepts, history and importance, sources, nature of differences, Islam and sectarianism), Islamic Culture & Civilization (basic concepts, historical development, characteristics, contemporary issues), Islam & Science (basic concepts, contributions of Muslims in science, relationship between Quran and science), Islamic

University of Sindh Jamshoro

Subject Name	: Microprocessors and Microcontrollers
Credit Hours	: 3+1=4
Course Code	: Theory (EE-220), Practical (EE-221)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Abdul Manan Memon

DESCRIPTION

This course introduces the fundamental concepts of microprocessors and microcontrollers, including architecture, instruction sets, programming, memory systems, and I/O interfacing. It covers ADC/DAC, interrupts, DMA, and interfacing techniques for developing microprocessor- and microcontroller-based systems. Practical sessions focus on programming, interfacing, and implementing embedded systems through hands-on experiments and projects.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the fundamental concept of microprocessor-based system design with the help of a block diagram and the impact of microprocessor-based systems on society, safety, and ethical issues for real life applications.	Cognitive	C2	6	38
	2	Apply knowledge of microcontroller-based system application design to interface the basic input and output devices, interface the basic input devices and memory ICS.	Cognitive	C3	3	62

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Perform microprocessor and microcontroller-based tasks under guidance on simulation and trainer kits.	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Intel Family Microprocessors (introduction to Intel family microprocessors, instruction set architecture (ISA), assembly language programming, hardware model, read/write cycles, exception and interrupt processing, memory systems, I/O devices, direct memory access (DMA), interfacing to memory and I/O devices, analog-to-digital converters (ADC), digital-to-analog converters (DAC)), Microcontrollers (introduction to PIC and Atmel 8051 microcontrollers, microcontroller architecture, addressing modes, programming of microcontrollers).

COURSE OUTLINE (PRACTICAL)

Study of Intel microprocessor ISA using its training boards, implementation of interfacing techniques (using gates, decoders, and SPLDs) to memory system and different I/O devices, learning and implementation of interrupt-driven I/O, learning and implementation of simple microcontroller-based circuits, followed by a course project for demonstration of the practical skills developed.

Third Year - Fifth Semester

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Subject Name : **Electrical Machines**
Credit Hours : 3+1=4
Course Code : Theory (EE-310),
Practical (EE-311)
Effective : 2K20-BE(EE)
Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/48/15
Marks : Theory (100),
Practical (100)
Instructor Name : Engr. Dr. Aamir Hussain Memon

DESCRIPTION

This course covers the principles, construction, operation, and performance of electrical machines. Topics include transformers, DC machines, AC machines, induction motors, synchronous machines, and special machines, along with their characteristics, control, and industrial applications.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Define electromechanical energy conversion concepts, working, and construction of AC and DC electrical machines.	Cognitive	C1	1	40
	2	Analyze AC and DC generators and motors with their types and performance.	Cognitive	C4	2	40
	3	Analyze the working principle, performance, and construction of transformers.	Cognitive	C4	4	20

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice laboratory experiments under guidance to provide insight into the functioning and performance of AC and DC (generators and motors, & transformers) and analyze the results using modern engineering tools.	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Magnetic Circuits (magnetic circuits and calculations, single-phase circuits, polyphase circuits), Transformers (principle of operation, construction, types, EMF equation, transformation ratio, equivalent values, equivalent power circuit diagram, impedance matching, operation and phasor diagram with and without load, measurement of losses and efficiency, parallel operation, cooling methods, three-phase connections, instrumentation transformers), DC Machines (construction, types, armature reaction, no-load and on-load voltage characteristics of series and shunt generators, division of loads in parallel operation, torque-speed characteristics, measurement of losses and efficiency), AC Machines (AC machine armature winding, three-phase windings, magnetomotive force (MMF) of distributed windings, speed and direction of rotating magnetic field), Induction Motors (types, construction, principle of operation, induced EMF, relation between stator and rotor quantities, phasor diagram, equivalent circuit diagram, torque-slip-power relations), Synchronous and Special Machines (synchronous generators, brushless DC motors, switched-reluctance motors, stepper motors).

COURSE OUTLINE (PRACTICAL)

Characteristics of DC series and shunt motors, DC series and shunt generators, AC induction motor, synchronous generator, induction generator, universal motor, brushless DC motor and switched reluctance motor; transformer theory and testing.

Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Dr. Shahnawaz Shah

DESCRIPTION

This course introduces the fundamental concepts of electromagnetic fields and waves. Topics include vector analysis, Coulomb's law, Gauss's law, electric and magnetic fields, Maxwell's equations, electromagnetic wave propagation, and applications in engineering systems.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Describe the vector algebra and vector calculus in a commonly used orthogonal coordinate system, introducing the concept of 20 operations that are frequently used throughout the course.	Cognitive	C2	1	30
	2	Analyze generally the charge at a stationary position or in motion to produce steady currents and apply them in various situations	Cognitive	C4	2	40
	3	Problem formulation and analysis in time-dependent fields (i.e., electromagnetic fields).	Cognitive	C4	3	30

COURSE OUTLINE (THEORY)

Vector Analysis (vector algebra, vector calculus, gradient, divergence, curl, line, surface, and volume integrals, Gauss's and Stokes' theorems, applications in electromagnetics), Electrostatics (Coulomb's law, electric field intensity, Gauss's law, flux density, divergence, energy in electrostatic fields, electric potential, conductors, dielectrics, capacitance, Poisson's and Laplace's equations), Magnetostatics (steady-state magnetic fields, magnetic forces, magnetic materials, inductance, Ampere's law, Biot-Savart law), Time-Varying Fields (Faraday's law of induction, displacement current, Maxwell's equations in integral and differential forms, wave propagation concepts), Electromagnetic Waves (uniform plane waves,

Effective : 2K20-BE(EE)
Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/48/0
Marks : Theory (100)
Instructor Name : Engr. Umair Abro

DESCRIPTION

This course explores the behavior of individuals and groups within organizations. Topics include motivation, leadership, communication, group dynamics, organizational culture, stress management, and strategies for improving productivity and workplace effectiveness.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Compare different models used to explain individual behavior related to motivation and rewards.	Cognitive	C2	11	34
	2	Demonstrate the processes used in developing communication and resolving conflicts.	Cognitive	C3	9	38
	3	Use group dynamics and demonstrate skills required for working in groups (team building) in ethical manner.	Cognitive	C3	8	28

COURSE OUTLINE (THEORY)

Introduction to Organizational Behaviour (organizational disciplines and topics, psychological perspective, social-psychological perspectives), Structure and Control in Organizations (organizational structure, bureaucracy, managerial work, contingency theory, organizational design), Individual and Work Learning (learning theories, learning and work), Stress (types of stress at work, occupational stress management), Individual Differences (personality and its factors, personality dimensions and social learning, intelligence), Motivation and Job Satisfaction (needs at work, theories of motivation and job satisfaction, correlates of job satisfaction), Group and Work (social interaction, dramaturgy and impression management, social skills), Group and Inter-Group Behaviour (group structure and norms, group processes, Hawthorne studies), Leadership (leadership as an attribute, leadership styles), Patterns of Work (classical approach, Marx, Weber, critique of labor, Foucault and disciplinary power), Conflict

Effective : 2K20-BE(EE)
Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/48/0
Marks : Theory (100)
Instructor Name : Engr. Muhammad Hussain Pirzada

DESCRIPTION

This course introduces the fundamentals of probability theory and random variables for engineering applications. Topics include probability concepts, conditional probability, discrete and continuous random variables, probability distributions, moments, linear regression, and stochastic processes.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain basic probability concepts and their use in different problems	Cognitive	C2	1	8
	2	Apply basic statistical techniques such as regression, curve fitting to engineering data and different types of random variables to solve problems in science and engineering.	Cognitive	C2	2	35
	3	Analyze knowledge of probability to solve problems from the field of electronics, electrical, and communications of applicable nature, falling in both discrete and continuous domain.	Cognitive	C4	2	57

COURSE OUTLINE (THEORY)

Set Theory and Probability Fundamentals (set theory, basic concepts of probability, conditional probability, independent events, Bayes' theorem), Random Variables and Probability Distributions (discrete and continuous random variables, probability density functions, probability distributions: binomial, Poisson, hypergeometric, Gaussian, uniform, exponential), Statistical Measures (mean, variance, standard deviation, moments, moment generating

Credit Hours	: 3+1=4
Course Code	: Theory (EE-312), Practical (EE-313)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Mr. Waseem Javaid Soomro

DESCRIPTION

This course introduces the analysis and characterization of continuous- and discrete-time signals and systems. Topics include system classification, time- and frequency-domain analysis, Laplace and Fourier transforms, Z-transform, stability, and applications in engineering systems.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Understand analogue and discrete-time signals analytically in time domain.	Cognitive	C2	2	50
	2	Apply signals in the time and frequency domains and discuss their significance. Design continuous time and discrete filters.	Cognitive	C3	3	50

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice the MATLAB simulations under guidance and analyze systems in the time and frequency domains.	Psychomotor	P3	5	100

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Signals and Systems (introduction, classification of signals, classification of systems, complex number applications in signal analysis), Time-Domain Analysis of LTI Systems (linear time-invariant systems, convolution, system response, BIBO stability, properties of LTI systems), Laplace Transform and Applications (Laplace transform, inverse Laplace transform, properties, applications to LTI system analysis and differential equations), Fourier Analysis (continuous-time Fourier series, Fourier transform, properties, frequency-domain representation of signals, applications in signal processing), Z-Transform (Z-transform, inverse Z-transform, properties, applications in discrete-time signal and system analysis), Analog Filter Design (introduction, low-pass, high-pass, band-pass, band-stop filters, filter specifications, applications in communication and signal processing).

COURSE OUTLINE (PRACTICAL)

Developing and understanding signal systems and transforms using MATLAB.

Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Mirza Altamash Baig

DESCRIPTION

This course introduces the principles and techniques of analog and digital communication systems. Topics include amplitude and angle modulation, pulse modulation, digital modulation schemes (ASK, FSK, PSK, QPSK, DPSK, MSK), sampling theory, transmission, detection, matched filters, and performance analysis in terms of bandwidth and bit error rate (BER).

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Analyze signals and systems for continuous wave and digital modulation and demodulation techniques. Analyze system performance with noise.	Cognitive	C4	2	50
	2	Justify transmitters and receivers for different modulation schemes	Cognitive	C5	3	50

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice the working of various ADC systems under guidance and demonstrate the awareness of ethical and professional responsibilities in communication system.	Psychomotor	P3	8	100

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

COURSE OUTLINE (THEORY)

Introduction to Communication Systems (introduction, basic concepts of analog and digital communication, system components, signal transmission and reception), Analog Modulation Techniques (amplitude modulation, frequency modulation, phase modulation, analysis of AM/FM/PM signals, advantages and applications), Pulse and Digital Modulation Techniques (pulse modulation, pulse code modulation, delta-sigma modulation, differential PCM, adaptive DPCM, transmission of digital signals), Sampling Theory (sampling theorem, Nyquist criterion, aliasing, reconstruction of signals), Digital Modulation Techniques (amplitude shift keying, binary phase shift keying, quadrature phase shift keying, differential phase shift keying, frequency shift keying, minimum shift keying, coherent and non-coherent detection), Performance Analysis (bit error rate, bandwidth considerations, matched filters, correlator, introduction to inter-symbol interference).

COURSE OUTLINE (PRACTICAL)

Study of different modulation techniques including amplitude modulation, frequency and pulse modulation, study of demodulation techniques; use of training modules/simulation tools (e.g., MATLAB/Simulink); a mini project.

DESCRIPTION

This course introduces the principles and analysis of control systems. Topics include open- and closed-loop systems, transfer functions, block diagrams, stability analysis, feedback control, root locus, frequency response methods, state-space representation, and controller design for engineering applications.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Understand the fundamental concepts of control systems and their applications	Cognitive	C2	1	10
	2	Analyze system behavior using time response and transient response techniques.	Cognitive	C4	2	54
	3	Design and simulate control systems to improve the energy efficiency and reduce environmental impact in industrial applications.	Cognitive	C6	7	12
	4	Evaluate control system performance and propose improvements, also evaluate the intellectual property and ethical design issues.	Cognitive	C5	8	24

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES:

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Assemble and operate control-system laboratory setups and simulation tools according to the given procedure.	Psychomotor	P4	5	30
	2	Perform control-system experiments and validate the measured and simulated responses.	Psychomotor	P5	5	40
	3	Integrate , tune, and troubleshoot control-system models independently to satisfy specified performance requirements.	Psychomotor	P6	3	30

COURSE OUTLINE (THEORY)

Introduction to Control Systems (introduction, open-loop and closed-loop systems, transfer functions, block diagrams, signal flow graphs), System Modelling (modelling, formation of differential equations of electrical, mechanical, and other systems, derivation of transfer functions), Performance Analysis of Closed-Loop Systems (performance analysis, stability, Routh's stability criterion, feedback control systems, steady-state and transient response of first-order, second-order, and higher-order systems), Frequency-Domain Analysis (root locus, Bode plots, polar plots, Nyquist stability criterion, gain and phase margins, Nichols chart), State-Space Analysis (state-space concepts, formation and solution of state equations, eigenvalues and eigenvectors, transfer function matrices), Controller Design (controller design using frequency response methods, root locus methods, design specifications, compensator design, and system tuning).

COURSE OUTLINE (PRACTICAL)

Familiarization with MATLAB Control Systems toolbox and MATLAB/SIMULINK toolbox; Modelling and simulation of armature-controlled and field-controlled DC motors, simulation of step response and impulse response with unity feedback using MATLAB; system analysis using root locus, bode plot, and Nyquist plot using MATLAB; PI, PD and PID controller design, analysis of servo system and higher order systems.

Subject Name	: Digital Signal Processing
Credit Hours	: 3+1=4
Course Code	: Theory (EE-322), Practical (EE-323)
Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Engr. Abdul Wahab Khokar

DESCRIPTION

This course covers analysis and processing of discrete-time signals and systems, including z-transform, Fourier transforms, FFT, multirate systems, and digital filter design.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the fundamental concepts, properties of discrete-time signals and systems in the time-domain, and perform various signal operations	Cognitive	C2	1	26
	2	Apply and solve signals and systems problems in time, frequency, and complex frequency domain.	Cognitive	C3	2	54
	3	Distinguish discrete-time systems, including filters design, with appropriate properties and windowing methods.	Cognitive	C5	3	20

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice signals under guidance in the time and frequency domains, and designing filters with various windowing methods using modern engineering tools.	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Introduction to DSP (physical and mathematical significance of digital signal processing, theoretical, application, and implementation perspectives, review of discrete-time signals and systems), Discrete-Time Transforms (Z-transform, discrete-time Fourier transform, bandlimited sampling, applications in signal analysis), Multirate Systems (introduction, decimation, interpolation, practical applications), Discrete Fourier Transform (DFT as a practical spectral analysis tool, algorithms for efficient computation including FFT and Goertzel Algorithm), Frequency-Domain Analysis and System Implementation (frequency-domain analysis of discrete-time systems, system structures for implementation, practical considerations), Digital Filter Design (techniques for digital filter design, FIR and IIR filters, practical significance and applications).

COURSE OUTLINE (PRACTICAL)

Review of MATLAB and Complex Exponentials, Introduction to DSP KIT, Audio Processing using DSP Kit, A/D and D/A Conversion: Digital Images, DFT and Spectral Leakage, Sampling, Quantization and Aliasing Using DSK, DFT Properties and Block Convolution, Frequency Response, Bandpass and Nulling Filters, Frequency Response and Pole Zero Plots of FIR/IIR Filters, Delays and FIR Filtering (DSK), FIR Filter Design Using Windowing, IIR Filter Design using Analog Design Techniques

Credit Hours	: 3+0=3
Course Code	: Theory (BH-320)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Anusa Shah

DESCRIPTION

This course introduces students to professional ethics, responsibilities, and practices in engineering. Topics include moral reasoning, ethical standards, law and morality, equity, justice, workplace responsibilities, and contemporary issues facing professionals.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Describe why legal and professional definitions of ethics exist; Identify the benefits that are expected to arise for engineers from acting ethically as well as specific consequences of acting unethically in society	Cognitive	C1	6	50
	2	Organize the ethical dilemmas arising at the workplace; identify possible actions that can be taken in response to a given ethical dilemma, and illustrate the probable consequences of these actions	Affective	A4	8	30
	3	Accept the importance of continuous professional development and life-long learning in a rapidly changing technological environment	Affective	A3	12	20

COURSE OUTLINE (THEORY)

Introduction to Ethics (contemporary ethical issues, professional ethics, moral reasoning, moral dilemmas, law and morality), Principles of Ethical Practice (equity, justice, fairness, ethical standards, codes of conduct, corporate and professional responsibilities), Moral Development (theories of moral development, ethical decision-making models, application of moral

Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Ms. Samra Memon

DESCRIPTION

This course develops students' abilities in technical writing and professional communication. Topics include essay writing, research and progress reports, proposals, presentations, and the use of visual aids and IT tools to effectively communicate technical information.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Recall clearly and fluently to produce effective technical documents.	Cognitive	C1	12	40
	2	Justify an appropriate communication style to different types of audiences both orally and written as per demand of their professional careers.	Affective	A5	10	60

COURSE OUTLINE (THEORY)

Presentation Skills (oral presentation techniques, use of visual aids, structuring presentations, audience engagement, clarity and style of delivery), Essay Writing (descriptive, narrative, discursive, and argumentative essays, techniques for developing content, coherence, and style), Academic Writing (writing research proposals and term papers with emphasis on style, content, language, form, clarity, and consistency, referencing and citation styles), Technical Report Writing (structure and format of technical reports, progress report writing, clarity and conciseness in technical communication, documentation of experiments and findings), Vocabulary Development (extensive reading for vocabulary building, use of academic and technical terminology in writing and presentations).

Subject Name	: Engineering Economics
Credit Hours	: 3+0=3
Course Code	: Theory (MS-416)
Effective	: 2K20-BE(E)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/0
Marks	: Theory (100)
Instructor Name	: Engr. Anusa Shah

DESCRIPTION

This course introduces the principles and applications of engineering economics. Topics include cost analysis, financial effectiveness, selection among alternatives, depreciation, valuation, capital budgeting, linear programming, production theory, and industrial economic decision-making.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Apply economic analysis methods (payback, Benefit-Cost Ratio) to evaluate engineering projects, considering their economic, social, and environmental impacts.	Cognitive	C3	7	64
	2	Evaluate the cost effectiveness of individual projects using the methods learnt, draw inferences for investment decisions, and compare the life cycle cost of multiple projects	Cognitive	C4	11	16
	3	Classify the depreciation of an asset using standard depreciation techniques to assess its impact on present or future value	Cognitive	C2	11	20

COURSE OUTLINE (THEORY)

Fundamentals of Engineering Economics (financial effectiveness, non-monetary values, economic environment, consumer and producer goods, measures of economic worth, price, supply and demand relationships), Selection Between Alternatives (present worth analysis, selection among materials and designs, investment philosophy, alternatives with identical and different lives), Value Analysis (cost concepts, cost-benefit analysis, feasibility studies, value

Subject Name : **Image Processing and Computer Vision**
Credit Hours : 3+0=3
Course Code : Theory (EE-414)
Effective : 2K20-BE(EE)
Pre-Requisites : Nil
Weeks/Lectures/Labs : 16/48/0
Marks : Theory (100)
Instructor Name : Engr. Dr. Sunder Ali Khawaja

DESCRIPTION

This course introduces the fundamentals and applications of digital image processing and computer vision. Topics include image acquisition, enhancement, restoration, segmentation, color processing, morphological operations, feature extraction, image compression, motion analysis, and practical computer vision techniques.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Understand the fundamental concepts and the mathematical tools used in digital image processing and computer vision.	Cognitive	C2	1	40
	2	Analyze high-level concepts that use both image processing and computer vision for real-world applications.	Cognitive	C4	3	35
	3	Analyze various algorithms for digital image processing and computer vision.	Cognitive	C4	5	25

COURSE OUTLINE (THEORY)

Digital Image Fundamentals (elements of visual perception, image sensing and acquisition, image sampling and quantization), Intensity Transformations and Spatial Filtering (histogram processing, fuzzy techniques, spatial filtering methods, image smoothing and sharpening), Frequency Domain Filtering (basics of frequency domain filtering, image smoothing and sharpening using frequency domain filters, selective filtering), Image Restoration and Reconstruction (noise models, periodic noise reduction, linear position-invariant degradations, inverse filtering, Wiener filtering, constrained least squares filtering, geometric mean filter, image reconstruction from projections), Color Image Processing (color fundamentals, color models, pseudo-color image processing, color transformations, smoothing and sharpening,

Subject Name	: Introduction to Robotics
Credit Hours	: 3+1=4
Course Code	: Theory (EE-412), Practical (EE-413)
Effective	: 2K20-BE(EE)
Pre-Requisites	: Nil
Weeks/Lectures/Labs	: 16/48/15
Marks	: Theory (100), Practical (100)
Instructor Name	: Dr. Zain Anwer Memon

DESCRIPTION

This course introduces the fundamentals of robotics, including robot classification, components, kinematics, dynamics, sensors and actuators, trajectory planning, and robot programming. Students will learn both theoretical concepts and practical applications in automation.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the necessary ingredients of robotic systems, ranging from basic to the state of the art.	Cognitive	C2	1	30
	2	Solve the kinematics (both forward and inverse) of robotic manipulators	Cognitive	C3	2	35
	3	Explain navigation schemes for mobile robotic systems, including ground and aerial robots.	Cognitive	C2	2	15
	4	Apply sensing and actuation techniques in the development of robotic systems.	Cognitive	C3	3	20

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Practice to model the kinematics and dynamics of a multi-degree-of-freedom manipulator under guidance and evaluate position controllers in the MATLAB/Simulink environment.	Psychomotor	P3	5	100

COURSE OUTLINE (THEORY)

Introduction to Robotics (fundamentals of robotics, classification of robots, advantages and disadvantages, components, degrees of freedom, joints, coordinates, reference frames, robot languages), Robot Kinematics (position analysis, forward and inverse kinematics, robots as mechanisms, matrix representation, homogeneous transformation matrices, Denavit-Hartenberg representation, inverse kinematic programming, degeneracy and dexterity), Dynamic Analysis and Forces (Lagrangian mechanics for robot dynamics, force analysis, torque computation, dynamic modelling of manipulators), Trajectory Planning (path vs. trajectory, joint-space vs. Cartesian-space descriptions, trajectory planning basics, joint-space trajectory planning, trajectory generation algorithms), Sensors and Actuators in Robotics (sensors, actuators, drive systems, feedback devices, integration with control systems).

COURSE OUTLINE (PRACTICAL)

Experiments to introduce the students to basic robotics and programming of programmable devices used in the robotics field.

Marks	: Theory (100), Practical (100)
Instructor Name	: Mr. Ghulam Mustafa Shoro

DESCRIPTION

This course introduces the principles and applications of power electronic devices and circuits. Topics include power semiconductor devices (diodes, SCRs, MOSFETs, IGBTs, TRIACs), rectifiers, DC-DC converters, inverters, AC controllers, switched-mode power supplies, and motor drives.

COURSE LEARNING OUTCOMES

Upon successful completion of the course, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Theory	1	Explain the operation and characteristics of power semiconductor devices and power-electronic circuits.	Cognitive	C2	1	20
	2	Analyze Power Conversion System and Circuits	Cognitive	C4	2	52
	3	Design Power Electronics Systems and Circuits	Cognitive	C6	3	10
	4	Evaluate the Performance and Efficiency of the Power Electronics System	Cognitive	C5	4	18
	3	Integrate , test, and troubleshoot power-electronic converters independently according to given design specifications.	Psychomotor	P6	3	30

Department of Electronic Engineering

Faculty of Engineering and Technology

University of Sindh Jamshoro

LABORATORY LEARNING OUTCOMES

Upon successful completion of the lab experiments, the student will be able to:

	CLO	Description	Domain	Taxonomy level	PLO	Marks
Practical	1	Assemble and operate power-electronics laboratory circuits and equipment according to prescribed safety procedures.	Psychomotor	P4	5	30
	2	Perform power-conversion experiments and validate the measured waveforms and performance.	Psychomotor	P5	5	40
	3	Integrate, test, and troubleshoot power-electronic converters independently according to given design specifications.	Psychomotor	P6	3	30

COURSE OUTLINE (THEORY)

Power Electronics (Introduction to power electronics, applications and significance, overview of power electronic systems, solid-state devices used in power electronics), Power Semiconductor Devices (Power diode, power BJT, power MOSFET, SCR, GTO, IGBT, TRIAC, DIAC, on-state and switching power losses, characteristics and applications of each device), Rectifiers (Semi-controlled, fully-controlled, and uncontrolled rectifiers; single-phase and three-phase rectifiers; six-pulse, twelve-pulse, and twenty-four-pulse rectifiers; performance analysis; applications), DC-DC Converters (Buck converter, Boost converter, Buck-Boost converter; operation, control, applications), Inverters (Single-phase and three-phase inverters; pulse-width-modulated (PWM) inverters; control techniques; applications in AC power systems), AC Controllers and Switched-Mode Power Supplies (AC voltage controllers; principles of operation; SMPS design and applications), Motor Drives (Fundamentals of AC and DC motor drives; integration with power electronic converters; industrial applications).

COURSE OUTLINE (PRACTICAL)

Design of converters; single-phase and three-phase uncontrolled, half-controlled and fully-controlled rectifiers; buck, boost and polarity inverting converters; flyback converter; PWM Inverters.

	3	Integrate, test, and troubleshoot industrial control systems independently according to given specifications.	Psychomotor	P6	3	30

COURSE OUTLINE (THEORY)

Electric Heating and Welding (Principles and applications of electric heating; induction heating; dielectric heating; high-frequency welding; spot welding), Industrial Drives (AC drives; DC drives; stepper motor drives; servo drives and mechanisms; applications in industrial automation), Measurement of Non-Electrical Quantities (Force and pressure measuring transducers; linear variable differential transformer (LVDT); speed and position transducers; semiconductor, photoelectric, and temperature transducers; Hall effect transducers/sensors), Digital Industrial Measuring Systems (Digital measurement techniques; signal conditioning; data acquisition systems; interfacing with industrial sensors), Industrial Process Techniques and Control Methods (Industrial process techniques; process control methods; feedback and feedforward control; process modelling), Industrial Control Using PLCs (Programmable logic controllers (PLCs); PLC programming; industrial control applications; ladder logic and function block programming), Power Distribution in Industries (Power distribution systems; electrical supply for industrial loads; safety and efficiency considerations), SCADA and Distributed Control Systems (Supervisory Control and Data Acquisition (SCADA) systems; distributed control systems (DCS); monitoring and control of process industries; integration of sensors, actuators, and communication networks).

COURSE OUTLINE (PRACTICAL)

Experiments related to the principles of welding and PLCs; speed control of DC, AC, and servo motors.

University of Sindh Jamshoro

Subject Name	: Final Year Project-I and II
Credit Hours	: 6 (FYP-I and FYP-II combined)
Course Code	: EE-418
Effective	: 2K20-BE(E)
Assessment Period	: Semester 7 and Semester 8
Semester 7 Status	: FYP-I (To be continued)
Completion Semester	: Semester 8 (FYP-II)
Marks	: FYP-I (100), FYP-II (100), Total (200)

Department of Electronic Engineering
Faculty of Engineering and Technology
University of Sindh Jamshoro

Final Year Project-I and II

CLO1	Cognitive Domain (C2)
	The student should identify the project domain and field of specialization.
CLO2	Cognitive Domain (C4)
	The student should analyze the literature and underline the research gap, accordingly.
CLO3	Cognitive Domain (C6)
	The student should propose the problem solution by creating a methodology based on the research gap found in the literature.
CLO4	Psychomotor Domain (P7)
	Students should build, implement, test, and analyze the working prototype that intends to achieve project aims and objectives.
CLO5	Affective Domain (A5)
	Display communication skills through the presentation, be able to demonstrate the project in exhibition, defend the project outcome as a team, and respond to the queries via an oral examination.
CLO6	Cognitive Domain (C6)
	Write and compile a report that interprets the working principle of the project free from plagiarism.
CLO7	Affective Domain (A4)
	Explain the impacts of the project in societal, environmental and application contexts.
